

Son Nguyen

(857) 488-2507 | sonnguyen@ufl.edu

EDUCATION

University of Florida (Since 2025)

Gainesville, FL

College of Engineering

Bachelor of Science in Industrial and Systems Engineering| Production & Logistics Concentration

- Transferred from the University of Massachusetts Amherst, Fall 2025
- **GPA:** 3.9/4.0; Chancellor Awards, Dean's List for all semesters
- **Relevant Coursework:** Material Science; Strength of Materials, Linear Algebra, IISE Six Sigma Green Belt; Project Management: R; Python; Calculus; Engineering Economics; Data Visualization; Statics, Mathematical Modeling, Simulation.

SKILLS & INTERESTS

Technical Skills: Word, PowerPoint, Excel; Python, VBA, SQL (Basic), Solidworks, MATLAB, OnShape, AMPL, SIMIO, Fusion 360, CNC Machining, Power BI, Power Automate, Jira, IQMS

Certifications: IISE Six Sigma Green Belt (2024), IISE Project Management (2025), CSWA (2025), America's Cutting Edge (ACE)

EXPERIENCE

MRP Solutions

New York, USA

Continuous Improvement Engineering Intern

May 2026 - Present

- Developed a Python-based production scheduling tool and interactive HTML dashboard that transformed IQMS Scheduling and Tool Location exports into a rolling 72-hour manufacturing schedule for the Toolroom to optimize Tool Changes with an accuracy of 98.7%.
- Designed and deployed the RCA Hub using Microsoft Power Apps and Power Automate to standardize root cause investigations, corrective action tracking, and engineering documentation for all 3 Manufacturing Sites.
- Built a Tooling Inventory Management system using Jira Assets and Power Automate to automate inventory tracking, reorder workflows, and engineering requests for over 1000 tools and parts.
- Partnered with manufacturing, quality, and operations teams to analyze production data, streamline workflows, and support continuous improvement initiatives such as 5s and TPM.

Teaching Assistant

Florida, USA

University of Florida, ESI3327: Matrixes and Numerical Methods

January 2026 - Present

- Assisted in grading students' assignments and exams in a class of 70 participants
- Held weekly office hours and review sessions to support students' understanding of course material

Undergraduate Research Assistant

Florida, USA

University of Florida, Interdisciplinary Manufacturing Engineering and Design (iMED) LAB

January 2026 - Present

- Conducted research on Additive Manufacturing processes in metal 3D printing
- Collected and processed raw samples from trials into data points for the optimization model.
- Attended weekly meeting and work update, carried out literature reviews on current industries' leading research and development

Hanoi Basketball Academy (HNBA)

Hanoi, Vietnam

Assistant Coach and Team Analytics

May - August 2024

- Developed a system of player development plan focused on constant data tracking regarding players' shooting percentage, in-body statistics, and performance.
- Incorporated different opponents' line-up analyses, shot charts, and shooting percentages during the Hanoi U18 Open Tournament scouting progress, netting HNBA its first significant tournament medal.
- Helped the Academy sign a major contract with one of Vietnam's premier professional team

RESEARCH EXPERIENCES AND PROJECTS

Student Research, Engineering Economics for Electricity Development in South Africa

- Designed three alternative energy systems using solar panels, traditional grids, and battery-supported solar systems for rural development.
- Conducted cost-benefit analyses and cash flow projections for installation and maintenance in the South African market.

Project: 3D SolidWorks & MATLAB Project – Pratt Truss Model Simulation

- Designed a 3D CAD model of a Pratt truss bridge using SolidWorks and a MATLAB script to analyze force reactions for multiple scenarios, determining tension and compression in truss members under changing load using simulations and numerical methods.

Team Leader, Improving the School Bus System in Vietnam at BKAV

- Conducted surveys and extensive interviews with 45 bus drivers and school managers.
- Incorporated AI face recognition technology by BKAV to automatically track students on buses without having to remove their masks during COVID-19. Developed an app to connect the bus driver, school officials, and parents directly.
